

USING SPACE HEATERS SAFELY

- **USE THE RIGHT KIND OF HEATER.** Some propane space heaters are designed only for use outdoors. Others are designed only for use indoors. Check your owner's manual or contact a qualified service technician to be sure you are using the right kind of heater.

- **DO NOT USE AN OUTDOOR HEATER INDOORS.** High levels of CO can be generated from heaters that are not designed for indoor use. High levels of CO can make you dizzy, give you headaches, or cause flu-like symptoms. In extreme cases, extended exposure to CO can result in brain damage or death.
- **READ YOUR SPACE HEATER MANUAL.** The appliance manufacturer's manual that came with your space heater tells how to set up and operate it safely. Read the entire manual and carefully follow all directions.

SMALL-CYLINDER SAFETY

You may occasionally use small propane cylinders to operate barbecue grills and other outdoor appliances. If so, be sure to follow these basic safety tips:

IF YOU SMELL GAS

1. Immediately put out all smoking materials and other open flames.

2. If you are able to, safely turn off the cylinder valve. To close the valve, turn it to the right (clockwise).

3. Immediately leave the area and call 911 or your local fire department.

4. Before you restart the appliance, have a qualified service technician inspect your cylinder and appliance.
